Radiative energy loss and damping effects

Joerg Aichelin, and Marcus Bluhm, and Pol Gossiaux,
and Thierry Gousset (SubaTech)

Sept 7, 2011

Energy loss

- quark and gluon energy loss is a central topic in ultra-relativistic heavy ion collisions

- collisional and radiative

- Bethe-Heitler regime, LPM effect. . .

. . . and damping

radiation and energy loss

Introduction

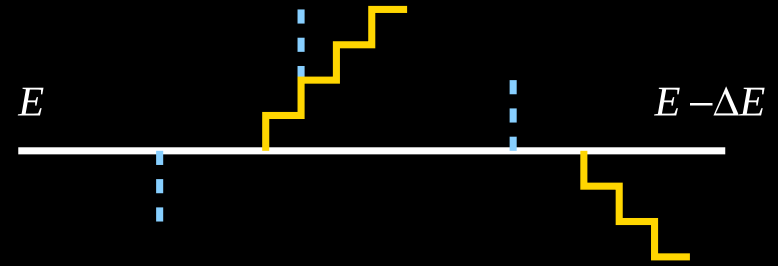
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion

(Q)ED case

Summary

radiative energy loss of quarks or gluons

an energetic parton in a hot medium ($E \gg T$)



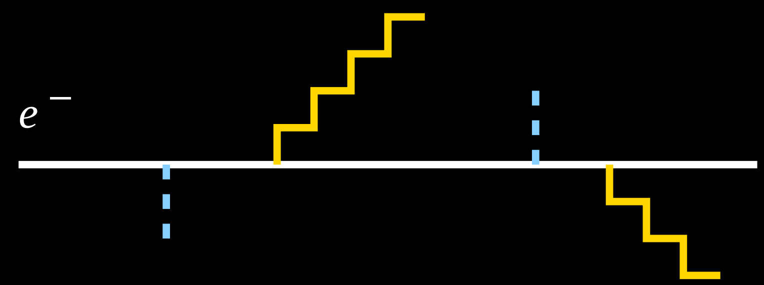
in electrodynamics

Introduction

QCD case
- ΔE
- in electrodynamics
- coherence
- LPM effect
- radiation spectrum
- formation time
- competing effects
- without damping
- with damping
- discussion

(Q)ED case

Summary



relativistic electron

- Bethe-Heitler spectrum

$\rightarrow$ radiation loss in matter

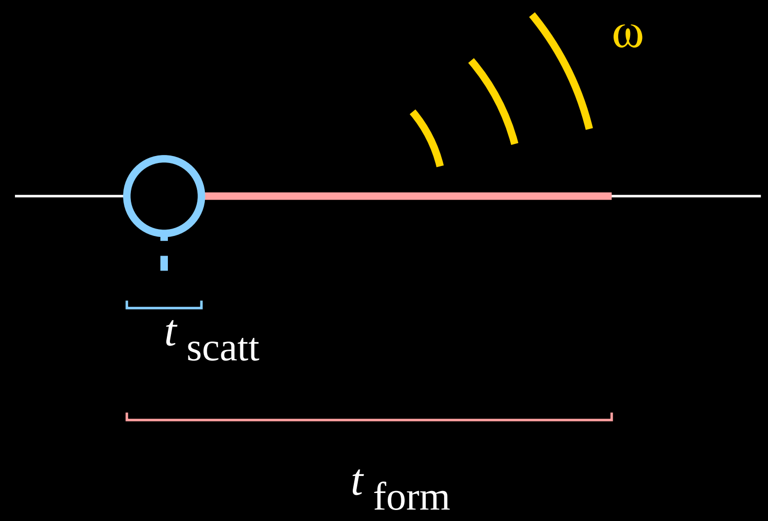
$X_0 =$ radiation length

length scale on which e^- looses its energy (on average)

coherence

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

to be accommodated with another essential of bremsstrahlung



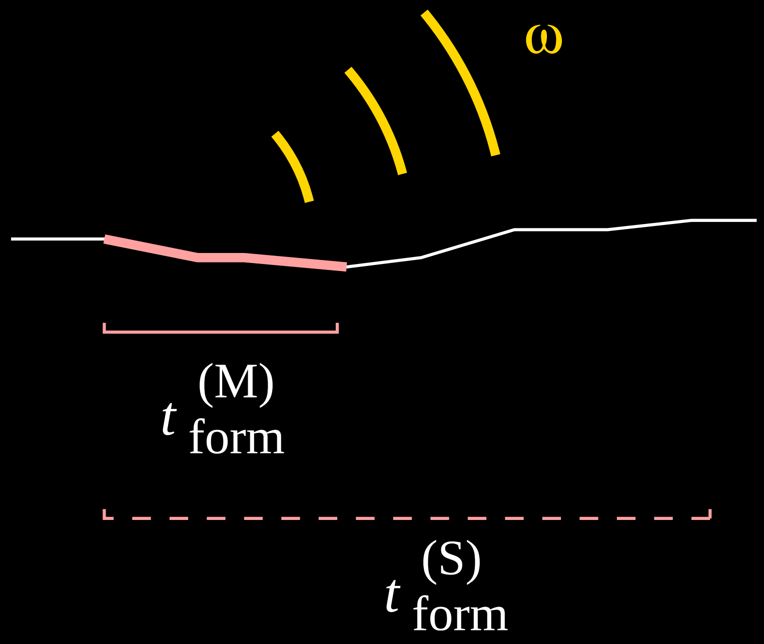
formation time $<$ radiation length

$(v \approx c = 1)$

breaks down at small ω and large E

including multiple scattering: LPM effect

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary



e^- multiple scattering speeds up decoherence

$\Rightarrow$ emission process cannot occur at full rate

radiation spectrum

Introduction

QCD case

ΔE

in electrodynamics

coherence

LPM effect

radiation spectrum

formation time

competing effects

without damping

with damping

discussion

(Q)ED case

Summary

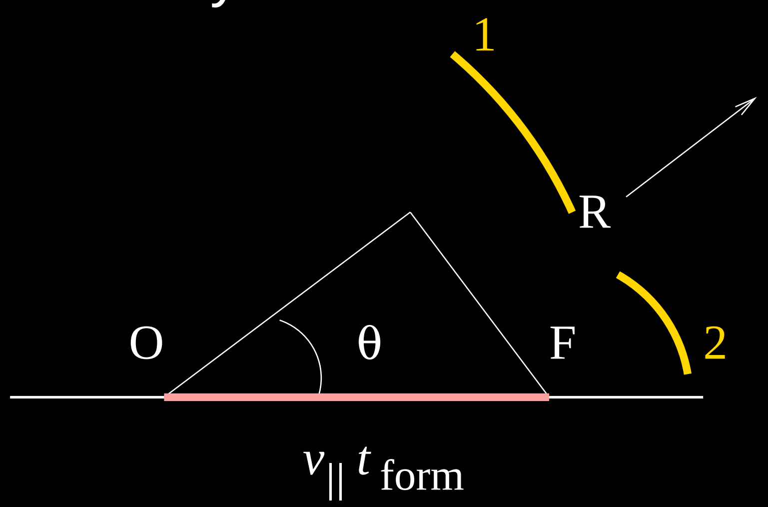
$dW/d\omega$ for an energetic parton using the scaling behavior

$$dW/d\omega \propto t_{\rm form}$$

specifically

$$\frac{dW}{d\omega} = \frac{t_{\rm form}}{t_{\rm BH}} \times \frac{dW_{\rm BH}}{d\omega}$$

$t_{\rm form}$? $\rightarrow$ diffraction theory



formation time

Introduction

QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion

(Q)ED case

Summary

$$\Delta\varphi(t,R) = \omega(t - t_{\rm form}) - \vec{k}\cdot\overrightarrow{FR} - \omega(t-0) + \vec{k}\cdot\overrightarrow{OR}$$

$$\Delta\varphi = -\omega\, t_{\rm form} + \underbrace{\vec{k}\cdot\overrightarrow{OF}}_{k_{||}\, v_{||}\, t_{\rm form}}$$

$$k_{||} = n\frac{\omega}{c}\cos\theta, \quad v_{||} = v\cos\theta_s$$

$$|\Delta\varphi| \equiv 1 \to t_{\rm form}$$

$$t_{\rm form} = \frac{1}{\omega\ |1 - nv\cos\theta_s\cos\theta|}$$

large formation time for ultrarelativistic particles, and small angles, and n close to 1

competing effects

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

1. wave propagation in medium (no damping)

$$n(\omega) = \sqrt{1 - \frac{m_g^2}{\omega^2}}$$

competing effects

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

1. wave propagation in medium (no damping) : n-driven regime $(v \cos\theta_s \to 1, \theta \to 0)$

$$t_1 = \frac{1}{\omega(n-1)} \sim \frac{2\omega}{m_g^2}$$

competing effects

Introduction

QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion

(Q)ED case

Summary

1. wave propagation in medium (no damping) : n-driven regime $(v \cos\theta_s \to 1, \theta \to 0)$

$$t_1 = \frac{1}{\omega(n-1)} \sim \frac{2\omega}{m_g^2}$$

2. (gluon) multiple scattering

$$k_{||}(t) = n\omega(1 - \hat{q}\, t/\omega^2)$$

competing effects

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

1. wave propagation in medium (no damping) : n-driven regime $(v\cos\theta_s \to 1, \theta \to 0)$

$$t_1 = \frac{1}{\omega(n-1)} \sim \frac{2\omega}{m_g^2}$$

2. (gluon) multiple scattering : multiple-scattering-driven regime $(n \to 1, v\cos\theta_s \to 1)$

$$t_2 = \frac{1}{\omega(\hat{q}\, t_2/\omega^2)} = \sqrt{\frac{\omega}{\hat{q}}}$$

competing effects

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

1. wave propagation in medium (no damping) : n-driven regime $(v \cos\theta_s \to 1, \theta \to 0)$

$$t_1 = \frac{1}{\omega(n-1)} \sim \frac{2\omega}{m_g^2}$$

2. (gluon) multiple scattering : multiple-scattering-driven regime $(n \to 1, v \cos\theta_s \to 1)$

$$t_2 = \frac{1}{\omega(\hat{q}\, t_2/\omega^2)} = \sqrt{\frac{\omega}{\hat{q}}}$$

3. damping

1 and 2

Introduction
QCD case

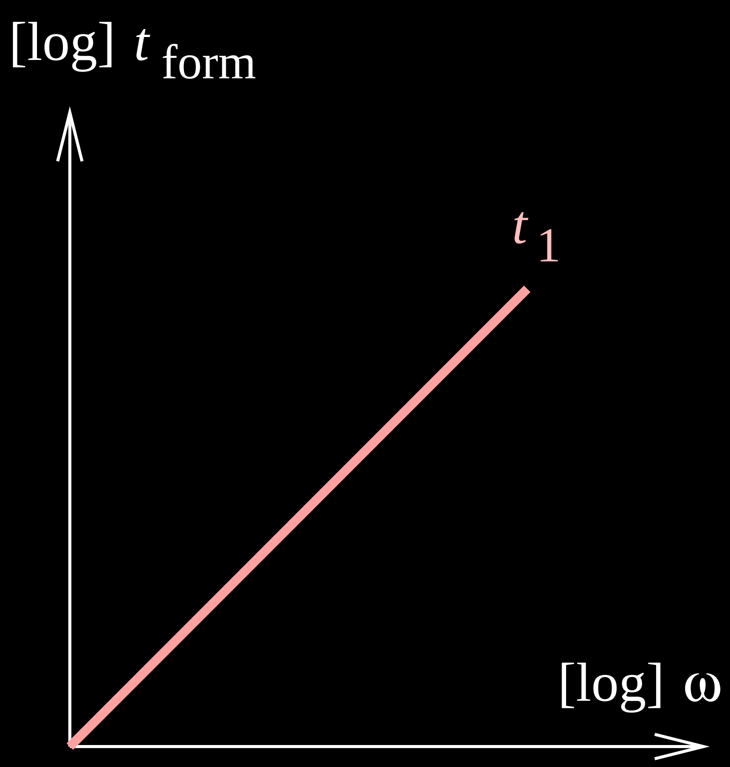
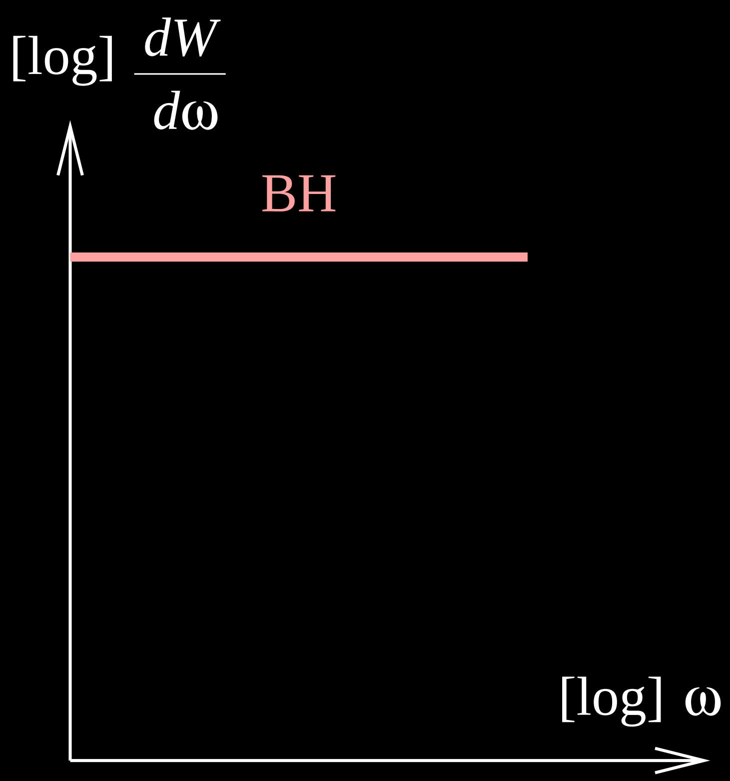
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary





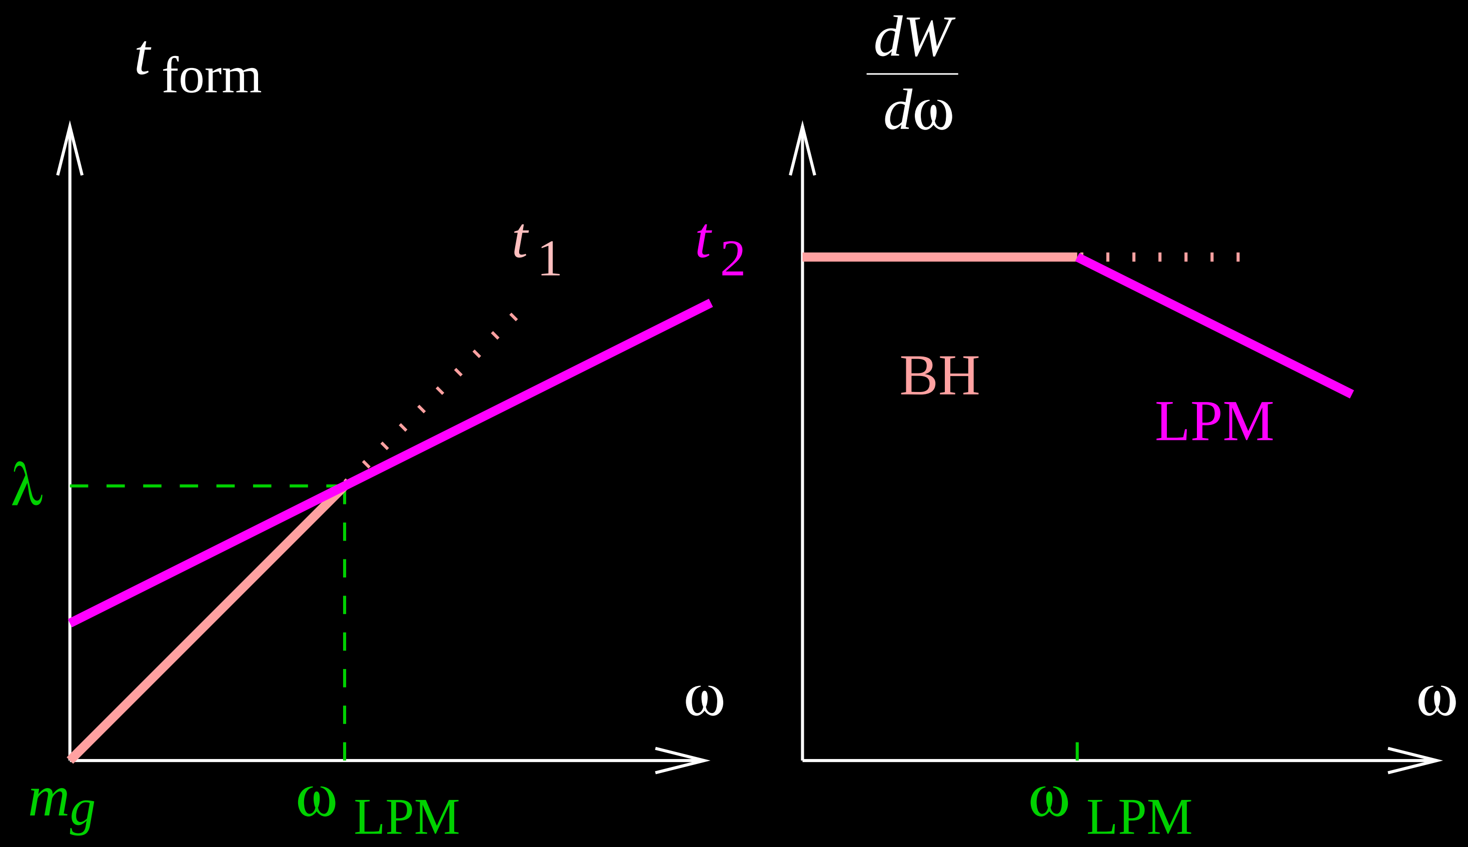
1 and 2

Introduction

QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion

(Q)ED case

Summary



$$t_1 = t_2 \quad \Rightarrow \quad \omega_{\mathrm{LPM}} = \frac{m_g^4}{\hat{q}} \text{ at which } t_1 = m_g^2/\hat{q} = \lambda$$

$+$ damping

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

$\sim e^{-\Gamma t} \Rightarrow$ damping regime when $t_{\text{form}} \gg 1/\Gamma$

$+$ damping

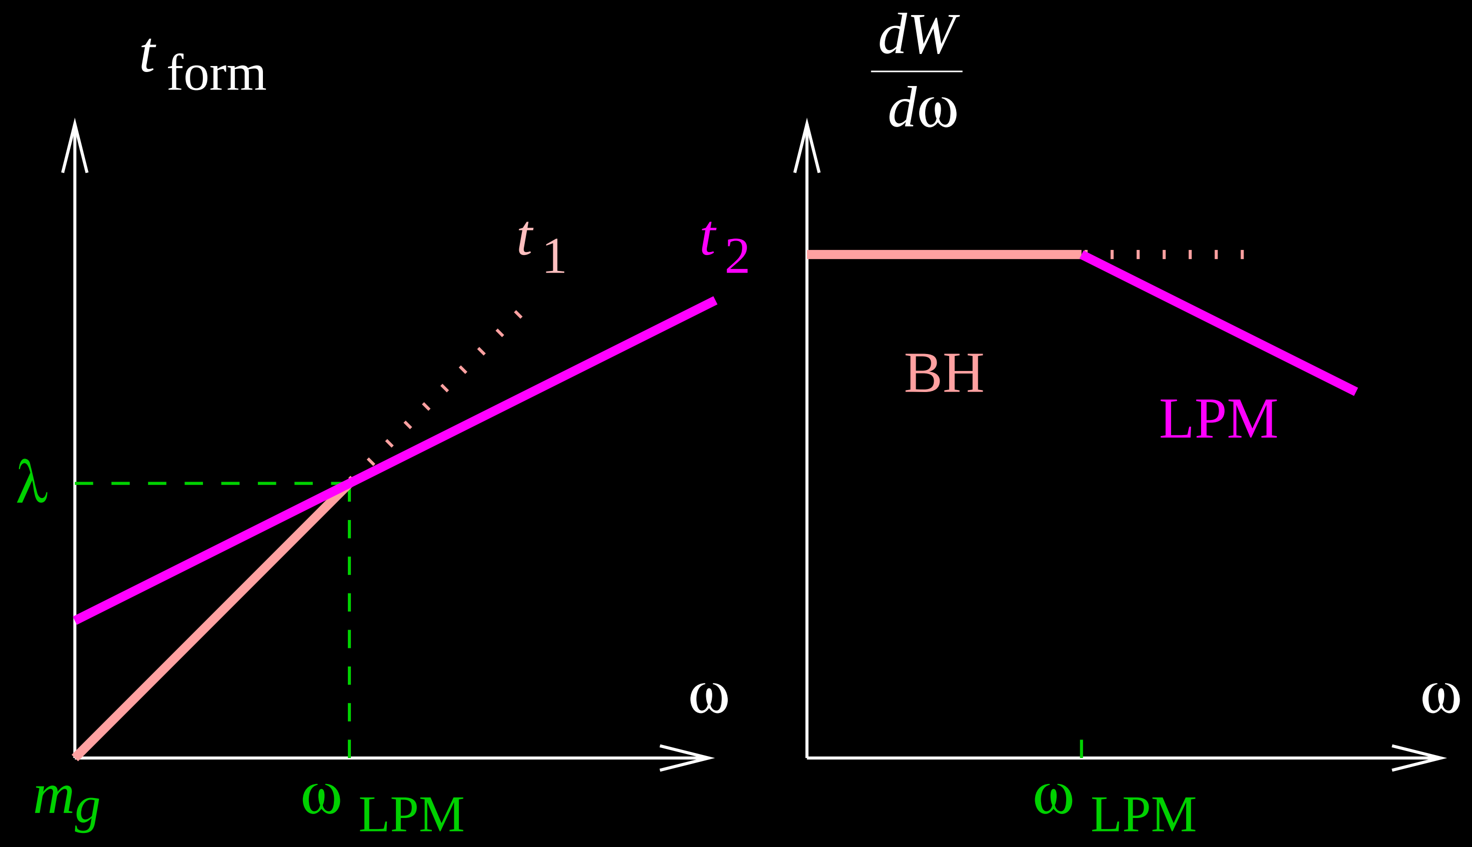
Introduction

QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion

(Q)ED case

Summary

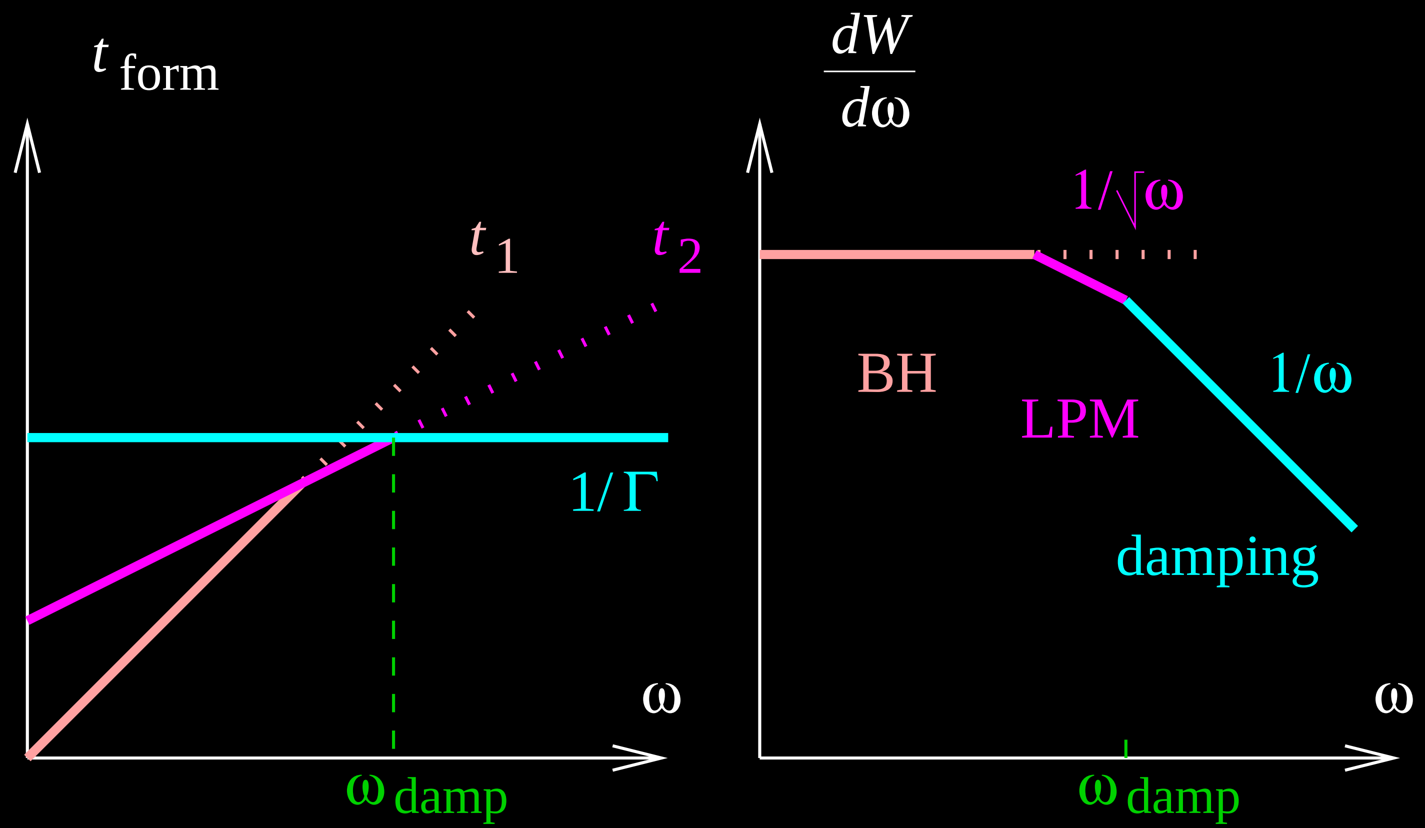
$\sim e^{-\Gamma t} \Rightarrow$ damping regime when $t_{\rm form} \gg 1/\Gamma$



$+$ damping

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

$\sim e^{-\Gamma t} \Rightarrow$ damping regime when $t_{\rm form} \gg 1/\Gamma$



$$t_2 = 1/\Gamma \quad \Rightarrow \quad \omega_{\rm damp} = \frac{\hat{q}}{\Gamma^2}$$

discussion

Introduction
QCD case
ΔE
in electrodynamics
coherence
LPM effect
radiation spectrum
formation time
competing effects
without damping
with damping
discussion
(Q)ED case
Summary

- $\lambda = O\left(1/(g^2T)\right)$ and $\Gamma = O\left(g^2T\right)$

$$\frac{1}{\Gamma} \sim \lambda$$

- is data (jet quenching) compatible with $\Gamma \sim \frac{1}{\lambda}$?
- quantitatively?
- microscopic origin of Γ?

goals
